

## Cloud Platform Build & Migration

Camelot needed new global infrastructure as a foundation to reach new markets and enable company growth

### Standardised solution

Delivered a new standardised multi-cloud platform whilst maintaining a single development environment.

### Efficient proof of concept

LiveWyer delivered a POC Kubernetes Platform across multiple cloud providers at pace.

### Agile method

Fast feedback loops and regular demonstrations ensured alignment with key stakeholders.

### Customer engineer training

Upskilled existing customer engineers through bespoke training to ensure long-term platform success.

## CHALLENGE

---

Running lotteries in multiple regions requires consistency for compliance as different areas have varying regulations. The client needed to implement a new, efficient, unified container management solution to deliver their fresh micro-services based product. They approached LiveWyer to build and migrate to an **agile, secure and performant platform** to allow the company to standardise how they deliver their solutions to a global client base.

*"LiveWyer have been instrumental at every stage of development, enabling consistency for compliance with all the varying regulations."*

Platform Architect - Camelot

## SOLUTION

---

LiveWyer's partnership allowed the business to deliver a new **standardised multi-cloud platform** whilst maintaining a single development and operational process.

## CONCLUSION

LiveWyer's partnership allowed the business to deliver a new standardised multi-cloud platform whilst maintaining a single development and operational process, all within a rigorous compliance framework. This allowed developers to focus on developing end services, the in-house Operations teams to extend a single solution and the business to focus on delivering value whilst maintaining a new core intellectual property.
